

## Power Up Your 5.7L/6.1L HEMI with a MAHLE Motorsport PowerPak

**Morristown, NC** – MAHLE Motorsports' latest release, the PowerPak piston assemblies for the 5.7L and 6.1L HEMI engines, are available for boosted and normally aspirated applications. As with all PowerPak assemblies, the pistons are dual coated first with a phosphate dry film lubricant to eliminate micro-welding in the ring grooves and galling in the pin bores. The skirts are then coated with MAHLE's proprietary Grafal skirt coating that reduces frictional drag along with wear and noise due to its unique cushioning property.

The assemblies are made complete with high quality German steel pins, race proven round wire locks and a low drag file fit performance ring set. Don't compromise the performance of your NEW HEMI with old school technology, trust MAHLE Motorsport, the technology leader to bring you cutting edge, winning performance. For details on all of the race winning features of a MAHLE Motorsport piston, visit [www.mahlemotorsports.com](http://www.mahlemotorsports.com).

MAHLE, the world's largest piston manufacturer operates its U.S. Motorsports division in Morristown, TN. For more information, contact [www.mahlemotorsports.com](http://www.mahlemotorsports.com), or call toll free: 888-255-1942.
