**LINGENFELTER PERFORMANCE ENGINEERING OFFERS
2010-2011 CAMARO SS ALUMINUM 9.5" DIFFERENTIAL ASSEMBLY**

DECATUR, Ind. – Lingenfelter Performance Engineering (LPE) announces a complete 2010-2011 Camaro SS 9.5" differential assembly kit is now available for drag, street and road race applications.

Available in several different ring and pinion ratios, the Lingenfelter cast aluminum differential assembly comes with street/drag race bias tuning or no pre-load that is suitable for road racing.

The kit includes an American Axle TracRite® GT Helical Gear Limited Slip Carrier Assembly, which features a tunable bias ratio and a torque-sensitive design that instantly biases torque before differentiation begins. Boasting smooth, quiet operation, the product can be used with or without a pre-load feature. An American Axle ring and pinion is also included.

In addition, Lingenfelter offers heavy-duty driveshafts and half-shaft assemblies to complete the differential installation.

For additional parts and accessory information, or to order product for your Camaro SS, visit www.lingenfelter.com and click on "Camaro Parts" in the toolbar.

For more than 34 years, Lingenfelter Performance Engineering has created a matchless heritage of bringing astounding new capabilities to the world's most sought-after sports cars. This legendary record of precision engineering continues today, as the highly skilled Lingenfelter production team continues to target design excellence in engine packages, superchargers and high-performance aftermarket components that

refine power, speed and control. For more information, visit www.lingenfelter.com, contact Lingenfelter Performance Engineering at 1557 Winchester Road, Decatur, IN 46733, or call 260.724.2552.
