NEW PRODUCT RELEASE

September 16, 2013 – Channel Islands, CA

New Maxflow RACE BOV - Lower Friction, Faster Response, Higher Durability, GREAT SOUND!

Team Vortech announces the introduction of the Maxflow Race BOV. The new generation of BOV (Blow Off Valve) is designed with full billet aluminum construction, a large rolling diaphragm and dual vent porting for quick valve response. The Maxflow Race BOV (P/N# 8D204-101) can be mounted in any position, and is adaptable to all types of boosted engine applications including (but not limited to) automotive, marine, aeronautical, etc. Designed with an adjustable spring preload and a mechanically retained valve seal, as well as utilizing the same mounting flange configuration as the current Vortech Race Bypass, allowing for a direct replacement on VTA (vent to atmosphere) applications.

"The consumer demand for a Vortech quality 360° discharge non-recirculating valve led us to design the Maxflow Race BOV, and let me tell you...we knocked it out of the park on this one". - Brian Ellis

Part Number 8D204-101

Black Anodized Finish

MSRP \$295.00

Vortech Superchargers, an AirPower Group company, engineers efficient, high technology air management solutions for automotive, marine, aeronautical, and other motorsports applications.
