Extreme Filters for Extreme Competition

AIRAIID now offers a full line of massive 16" round universal filters to address the unique needs of racers that are operating in extreme environments. These new filters are capable of keeping up with the high-flow demands of racing engines while filtering out dirt and debris. Available with a variety of heights, screens, and filter media, these new filters offer coverage for a wide range of applications.

Developed in partnership with AIRAIID-sponsored off-road racers, including Corry Weller and Greg Adler, these new 16" filters have been extensively tested in short-course off-road as well as long-distance desert racing. The filters are available with three types of filter media: Oiled SynthaFlow, dry SynthaMax, and oiled cotton-only (no synthetic layer of material as with our SynthaFlow). All of the filters are available in red or blue and are offered in 3", 4", and 5" heights. Further, each filter is available with or without an external honeycomb-style wire screen, which adds an extra layer of protection for the filter media from rocks and debris.

Like the rest of AIRAIID's premium filter line, the 16" round filters are constructed of a special blend of polyurethane that will not warp or crack over time while being capable of withstanding the extreme temperatures and conditions commonly found in racing. Each one is hand-made in our manufacturing facility, allowing a level of quality control that is unmatched in the industry.

For more information on the new 16" filters or the rest of AIRAIID's product line, visit www.airaid.com or call 800-498-6951.
